

Print Solutions

Print Solutions from your BlackBerry Smartphone

Condor Print - Print anything, anywhere

With Condor Print, you can print any common type of file on a nearby printer. Print documents that cannot be viewed easily on the BlackBerry® smartphone screen. The Condor Print family consists of three print applications:

Print To Fax, Print To Network, and Bluetooth Print.

Condor Print to Fax - Print from your BlackBerry smartphone to any fax machine in the world

Designed to minimise resource usage with maximum user experience. The solution enables you to print email and attachments to any fax machine worldwide. Printing an email or attachment is just as easy as replying to an email. Choose 'Print to Fax' from the email menu, fill in the fax number, and in a few seconds the complete email and attachment rolls out of the designated fax machine.

Condor Print to Network - Integrate your BlackBerry smartphone with your Print Environment

A mobile enterprise print solution for BlackBerry. You can print emails and attachments to any corporate printer across the enterprise. Whether you work in a large office block or visit remote sites, print important information when you need it. No printer drivers and direct connections to printers are required. Any common document format can be printed in the same layout.

All the options are just one click away. In a simple menu you can select what to print, to what printer, the number of copies and track the print job status – as if you were using a desktop. Just open the email, select 'Print' from the menu and choose the nearest printer to you.

Condor Bluetooth Print - Print from your BlackBerry smartphone as if you were printing from your computer

Condor Bluetooth Print makes it possible to truly print anywhere. Print emails and attachments to any paired Bluetooth-enabled printer as long as you have a Bluetooth-enabled BlackBerry smartphone. Any email and common type document can be printed in the same layout.

You can select what to print, to which printer and the number of copies, then issue the command and track the print job status – just like you can on your desktop computer. You don't need to install additional printer drivers since Condor Bluetooth Print uses existing infrastructure and printers. Data is securely transmitted over the BlackBerry network.

The three print solutions of Condor Print together, lets you print any document – anytime, anywhere. Condor Print is secure!
