

XE2 removes the complexity of operating Exchange e-mail, Archiving, SharePoint, CRM and BlackBerry. We manage and host everything so you can **keep working at 100%**

at a glance:

- captures new and historical messaging data, consolidates and stores it in a secure archive
- reduces risk associated with data held in .pst files, by bringing the data back under corporate control
- assists organisations to achieve compliance objectives by capturing data, providing secure access to it and auditing all activities
- incorporates Quest Software's 'Archive Manager' – a best-of-breed solution for e-mail archiving, search and retrieval
- two products available – archive only, and archive with compliance
- provides powerful search tools to facilitate legal discovery and improve user productivity
- highly secure and reliable e-mail storage
- full support for mobile devices

Hosted archiving

product datasheet

Why choose Exchange Archiving?

E-mail is an essential working tool for most businesses.

So it's critical to store e-mail information carefully, to ensure that it can be retrieved when necessary. Nowadays, every business has to deal with the challenge of managing increasing amounts of data.

In addition, there are corporate governance guidelines and industry regulations to consider. Legal compliance is now an issue for businesses of all sizes.

Our archiving solution offers you a complete service that reduces the costs of e-mail storage, and provides a legally compliant solution too.

Our service includes initial set-up, customer support and system monitoring, together with our service level guarantee.

XE2 is a Microsoft Gold Certified Partner. We have designed and delivered a scalable hosted Exchange platform, enabled through a simple yet powerful self-administration portal. Our hosted archive solution is available to those customers that are present on that platform. This frees you from needing any messaging systems on-site as XE2 manages and maintains both services.

Feature list: Hosted Archive

Guaranteed Service Level	✓	✓

Note:

* Only guaranteed with the Archive with compliance product.

** A copy of all e-mails sent, received and deleted will be archived for the defined period.

Archive only service

This service provides a solution to store critical organisational information – some of which may be required in the future. This service only archives those e-mails that have passed a specified retention date. You set this at the time that we set up the system.

Our service partners:

Archive with compliance service

With this service, organisations can quickly produce e-mail data for audits, investigations and litigation. Our service allows you to find and retrieve data in minutes, enabling you to visually zero-in on specific content of interest. You can set granular permissions to retrieve items from particular mailboxes, or across the entire archive, and can perform fast searches based on sender, recipient, date, subject, message keyword or attachment keyword.

You just need to specify the exact requirements of your retention policy at the time that we set up the system.

Data stored in the Archive Manager will be billed on a monthly basis.

Why choose XE2?

Our customers demand a secure, reliable and financially sound service of the highest quality.

Unique in our field, XE2 delivers class-leading service built on our partnership with NTT Europe Online, giving customers one of the best solutions in the market today. They are also a Microsoft Gold Partner, and accredited with BS7799, ISO 9001 and SAS 70.

We offer comprehensive services and products, with all the necessary hardware and software included – either hosted at NTT Europe Online's data centre, or on your own premises.

We focus on cost efficiency to ensure affordability, and we add real value to your business – increasing efficiency, peace of mind and flexibility.

Altogether, this delivers a formidable solution for organisations of all sizes.
