

XE2 removes the complexity of operating Exchange e-mail, Archiving, SharePoint, CRM and BlackBerry. We manage and host everything so you can **keep working at 100%**

at a glance:

- a fully managed Microsoft Hosted Exchange service enabling e-mail on the move
- supports BlackBerry access
- supports Windows Mobile with push technology
- access all the benefits of your Exchange service wherever you are
- secure encrypted data transmission

## Mobile network services

product datasheet

### Why choose Mobile e-mail?

Is e-mail vital for your business? Do you have employees who are always on the move? Do you want to know exactly what your IT costs will be each month?

Our popular mobile e-mail service – part of our hosted Exchange e-mail service – helps you to work more securely with your business e-mail wherever you are. You can use your company's own e-mail address and shared address books and access all information stored in work diaries.

You can use your PC, mobile or PDA to access your e-mail account. In fact wherever you have internet access, you'll be able to get access to all of your e-mail. That's perfect for those employees who are always on the move.

With our hosted service, there are no set-up, hardware, software or support costs. There's just a regular, per user fee each month.

For BlackBerry synchronisation, a small licence fee is incurred on set-up. Please note that you are responsible for the device and your own airtime contract.

XE2 is a Microsoft Gold Certified Partner. We have designed and delivered a scalable hosted Exchange platform, enabled through a simple yet powerful self-administration portal.

## BlackBerry

With a BlackBerry, you can stay connected to e-mail, phone, web and other organiser features through one device. Our service includes BlackBerry 'push' technology, which means that your e-mail finds you – not the other way round.

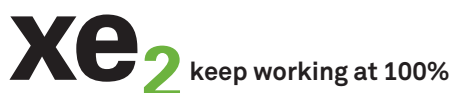

## Windows Mobile

With any enabled Windows Mobile device, you can stay connected to e-mail, phone, web and other organiser features through one device. This means that you can benefit from the same quality of experience as that of a Blackberry user.

We include this service as part of our Mobile e-mail service – at no extra cost.

## Our service partners:

## What's included

- send and receive e-mail
- push technology
